The Frost Wash Boss Brushless Wash and Dry System

The Frost Wash Boss is intended for tough conveyor applications where high contamination settings are the norm or where daily wash downs are required (e.g. USDA requirements). By removing accumulated debris, the Frost Wash Boss keeps your conveyor system running at peak efficiency and maximizes its useful life. This cleaning solution saves you money by reducing down time and ensuring a smooth running chain day after day. The Frost Wash Boss is compatible with all sizes of overhead monorail and power & free systems.

1 Foam

The cleaning agents are applied by the spray jets. The jets are directional and are controlled by the operator for optimal cleaning.

2 Rinse

The rinse is applied by spray jets not brushes. Using high pressure water jets and no physical brushes means that there are no moving mechanical parts. Brushes wear out and need replacement, and every time contact is made, they wear on the trolley and the brush. The water jets are directional and are controlled by the operator for optimal cleaning.

3 Dry

Air knives are used to dry the chain, trolley brackets, and trolley wheels. Compared to other wash and dry systems Frost's is unique when it comes to drying. Other systems typically use either a gas or an infrared heater to dry the chain and trolleys. These heaters are expensive to operate and maintain. Using air knives to blow off the water following the rinse makes the most economical sense for our customers.

The Frost Wash Boss brushless chain and trolley wash and dry system:

- Automatically washes and dries chain, trolley brackets, and trolley wheels while your conveyor system operates;
- Eliminates expensive and time consuming manual cleaning;
- Removes obstructive contamination;
- Is made from stainless steel;
- Is user friendly and easy to maintain;
- Operates as a brushless system minimizing wear on your system;
- Simple to manage with an understandable control box.

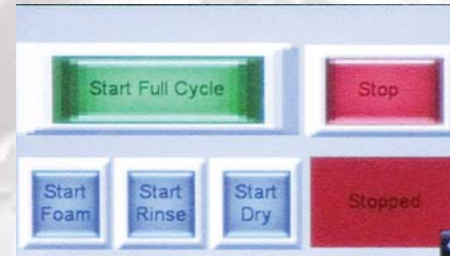

Cleaning cycles are triggered by powerful magnets.

Heavy duty construction throughout the entire system.

Solid brass, not plastic fittings.

The control box is constructed of stainless steel and is suitable for a wash-down environment. It is intuitive and easy to use. Once installed, all you need to do is press the start button and it automatically runs.
